

The compact inline sensor **SONOFLOW® IL.52/3 V2.0** serves to quickly detect smallest flow rates of liquids.
Constructed as a built-in component for machines and apparatuses, the sensor can easily be mechanically installed and electrically integrated into the control system. Due to the current, frequency and switching outputs industrial dosing applications can be supported. The RS-485 interface (SONOTEC® protocol; Modbus® via software

settings) allows bus operation of up to 12 sensors in rough industrial environments.

Specifically designed for the use in areas with rigorous hygiene requirements, the sensor is suitable for circulation cleaning and steam sterilization.
